MUNSHI SARIFUL ISLAM

iOS Developer

+91-9091699176 | munshsarif176@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Results-driven iOS Developer with 4+ years of experience across Tata Consultancy Services and Accenture, specializing in building scalable and user-centric iOS and iPad applications using Swift, SwiftUI, UIKit, and Combine. Experienced in REST API integration, offline data handling with Core Data, and implementing secure features like biometric authentication. Proficient in MVVM architecture, XCTest, and CI/CD pipelines, with a strong focus on writing clean, maintainable code and optimizing app performance. Adept at collaborating in Agile environments to deliver high-quality applications that enhance user experience and engagement.

TECHNICAL SKILLS

- **Languages & Frameworks:** Swift, SwiftUI (primary), UIKit, Combine, Swift Concurrency (async/await)
- **Architecture & Design Patterns:** MVVM, MVC, Protocol-Oriented Programming, Dependency Injection, Delegation, Singleton
- **iOS Frameworks & Features:** UserNotifications, Core Location, MapKit, Cocoa Touch
- **Networking & APIs:** URLSession, Alamofire, RESTful APIs, JSON Parsing, Firebase
- **Persistence & Security:** Core Data, UserDefaults, Keychain, Secure Coding Practices
- **Testing & Performance:** XCTest, XCUITest, Instruments, Debugging, Performance Profiling
- **CI/CD & Distribution:** GitHub Actions, Bitrise, TestFlight, App Store Connect, Swift Package Manager
- **Tools:** Xcode, Git, GitHub, GitLab, Jira, Postman, Figma
- **Practices:** Agile/Scrum, Clean Code, Offline-First Architecture

PROFESSIONAL EXPERIENCE

IOS Application Developer | Accenture, Pune | Aug 2026 – Present

- Working as an iOS developer, building native iOS applications using Swift, SwiftUI, and UIKit.

iOS Application Developer | Tata Consultancy Services, Kolkata | Jan 2022 – Aug 2026

- Engineered scalable iOS and iPad applications in Swift, SwiftUI, and UIKit — now actively used by 1000+ operational users across Air India and PG&E.
- Built robust RESTful API integrations using URLSession with structured JSON parsing and multi-layer error handling, ensuring reliable data flow across high-stakes enterprise environments.
- Boosted network efficiency by ~15% by redesigning API consumption patterns and introducing caching strategies — directly reducing server load and improving perceived app speed.
- Crafted fully responsive, accessible UIs with Auto Layout and Dynamic Type, delivering a consistent experience across all iPhone and iPad form factors used in field and in-flight environments.
- Architected MVVM-based application structures across multiple projects, enabling clean separation of concerns, easier onboarding for team members, and maintainable codebases at scale.
- Shipped production features including push notifications, image upload pipelines, user feedback modules, and offline data persistence via Core Data — all deployed to 1000+ users in live enterprise apps.
- Contributed consistently across 2-week Agile sprints within a 9–12 person iOS team, coordinating with designers, backend engineers, and product owners to ship features on schedule.
- Participated actively in peer code reviews, applying best practices in memory management, multithreading safety, and Instruments-based profiling to improve overall app stability and runtime performance.
- Owned end-to-end release cycles via App Store Connect — managing TestFlight beta distribution, semantic versioning, crash monitoring, and user feedback triage across multiple production apps.

KEY PROJECTS

Air India – Cabin Crew Voyage Report Application

Built a mission-critical iOS application enabling Air India cabin crew to digitally log in-flight voyage reports — covering seating, meals, and onboard service issues. Personally owned offline-first data sync using Core Data, RESTful API integration via Combine, end-to-end UI screens and navigation flows, push notification delivery, and ongoing bug fixes and stability improvements. Replaced a previously paper-based reporting process, enabling faster issue visibility and improved coordination with ground teams across live flight operations.

Technologies: *Swift, UIKit, Combine, Core Data, RESTful APIs*

Air India – Pilot Plus Enterprise App (iPad)

Engineered a full-featured iPad enterprise application for Air India flight operations — covering real-time crew detail management, arrival and departure monitoring, and automated fuel efficiency calculation. Architected an offline-first Core Data layer ensuring uninterrupted access across all three modules during flights, with seamless background sync upon reconnection. Delivered a unified workflow that replaced multiple fragmented tools, improving operational visibility and onboard service coordination for crew across daily flights.

Technologies: *SwiftUI, Combine, RESTful APIs, Core Data, Push Notifications*

PG&E – Inspect & Sustain Enterprise Applications

Developed and shipped new features on PG&E's field inspection platform using a SwiftUI + UIKit hybrid architecture via UIHostingController — extending an existing production codebase without disrupting live functionality. Introduced automated vehicle data pre-filling via RESTful API integration, eliminating repetitive manual entry for field engineers and improving data accuracy at the point of capture. Delivered targeted UI/UX improvements that streamlined inspection workflows, reducing friction across daily field operations.

Technologies: *SwiftUI, UIKit, Combine, RESTful APIs*

EDUCATION

Bachelor of Science (H) in Computer Science

University of Calcutta | 2017–2020 | First Class — 74.75%

Achievements

- Represented Tata Consultancy Services (TCS), Kolkata in corporate-level cricket tournaments, showcasing strong teamwork and discipline.
- Actively participated in inter-company cricket competitions, contributing to team performance and collaboration.
